Love Lifts the Heart - Nancy Crapser Hunt 2009-12-15

This book, I have written, has helped to release all the tension I had with the obstacles I met along with the raising of this family. With the farm life and the large family, including a son with birth defects and Down's syndrome, life was strenuous. Years of struggling to keep the family well and happy. With the help of good doctors and surgeons, in Bobby's case, we have seen that it can be done. I was always trusting God in each incidence. It is my hope that this book will prove to be an inspiration to any and all who have the privilege of reading it.

Winter, White and Wicked - Shannon Dittmore 2020-10-13

Mad Max: Fury Road meets Frozen in this striking YA fantasy about a rig driver's journey to save her friend Twice-orphaned Sylvi has chipped out a niche for herself on Layce, an island cursed by eternal winter. Alone in her truck, she takes comfort in two things: the solitude of the roads and the

favor of Winter, an icy spirit who has protected her since she was a child. Sylvi likes the road, where no one asks who her parents were or what she thinks of the rebels in the north. But when her best friend, Lenore, runs off with the rebels, Sylvi must make a haul too late in the season for a smuggler she wouldn't normally work with, the infamous Mars Dresden. Alongside his team—Hyla, a giant warrior woman and Kyn, a boy with skin like stone—Sylvi will do whatever it takes to save her friend. But when the time comes, she'll have to choose: safety, anonymity, and the favor of Winter—or the future of the island that she calls home.

Neuronal Mechanics and Transport - Daniel M. Suter 2016-05-26

Understanding the underlying mechanisms of how axons and dendrites develop is a fundamental problem in neuroscience and a main goal of research on nervous system development and regeneration. Previous studies have provided a tremendous amount of information on signaling and cytoskeletal proteins regulating axonal and dendritic growth and guidance. However, relatively little is known about the relative contribution and role of cytoskeletal dynamics, transport of organelles and cytoskeletal components, and force generation to axonal elongation. Advancing the knowledge of these biomechanical processes is critical to better understand the development of the nervous system, the pathological progression of neurodegenerative diseases, acute traumatic injury, and for designing novel approaches to promote neuronal regeneration following disease, stroke, or trauma. Mechanical properties and forces shape the development of the nervous system from the

cellular up to the organ level. Recent advances in quantitative live cell imaging, biophysical, and nanotechnological methods such as traction force microscopy, optical tweezers, and atomic force microscopy have enabled researchers to gain better insights into how cytoskeletal dynamics and motor-driven transport, membrane-dynamics, adhesion, and substrate rigidity influence axonal elongation. Given the complexity and mechanical nature of this problem, mathematical modeling contributes significantly to our understanding of neuronal mechanics. Nonetheless, there has been limited direct interaction and discussions between experimentalists and theoreticians in this research area. The purpose of this Frontiers Research Topic is to highlight exciting, and important work that is currently developing in the fields of neuronal cell biology, neuronal mechanics, intracellular transport, and mathematical modeling in the form of primary research articles, reviews, perspectives, and commentaries.

Phil Edmonston, Canada's automotive "Dr. Phil," pulls no punches. He says there's never been a better time to buy a new car or truck, thanks to a stronger Canadian dollar and an auto industry offering reduced prices, more cash rebates, low financing rates, bargain leases, and free auto maintenance programs. In this all-new guide he says: Audis are beautiful to behold but hell to own (biodegradable transmissions, "rodent snack" wiring, and mind-boggling depreciation) Many 2011-12 automobiles have "chin-to-chest head restraints, blinding dash reflections, and dash gauges that can't be seen in sunlight, not to mention painful wind-tunnel roar if the rear windows are opened while underway Ethanol and hybrid fuel-saving claims have more in common with Harry Potter than the Society of Automotive Engineers GM's 2012 Volt electric car is a mixture of hype and hypocrisy from the car company that "killed" its own electric car more than a decade ago You can save \$2,000 by cutting freight fees and "administrative" charges Diesel annual urea fill-up scams can cost you \$300, including an \$80 "handling" charge for \$25 worth of urea Lemon-Aid's 2011-12 Endangered Species List: the Chinese Volvo, the Indian Jaguar and Land Rover, the Mercedes-Benz Smart Car, Mitsubishi, and Suzuki

"The Science of Sailing", met als ondertitel "A Complete Guide to the Physics of Sailing and the Naval Architecture Governing the Performance of Sailing Yachts" betreft een serie boeken over de wetenschap van het zeilen en het ontwerp en het gedrag van zeilende vaartuigen. Het eerste deel met als aparte titel "The Attainable Speed Under Sail" behandeld, naast veel basiskennis, de snelheid van diverse typen zeilende vaartuigen (voornamelijk kleine en grote zeiljachten). De basis daarvan is een wiskundig model dat de krachten op de zeilen en op de onderwater romp, kiel en roer in rekening brengt.
