*A Few Thousand Bucks* - 2017-03-31

In Ezra's first book, he learned about baseball, girls, cars, drinking, and a lot of hard physical labor, not necessarily in that order. America had not yet been pulled into the war in Europe, and we didn't yet know much about that strange little country across the Pacific, known as Japan. As we pick up the story in book two, Ezra is now in his early 20's, working hard for meager pay, and a long way from his family in

Illinois and Indiana. He has been to a handful of states, now he thinks he would like to see the world. He enlists in the military and asks to go to the Philippines. He talks about baseball, girls, cars, and drinking, not necessarily in that order. He gets married on Independence Day, and soon after, his country also goes to war. He was on a troopship heading for the Philippines when news came over the radio about Pearl Harbor. It said, "This is not one of those Orson Wells stories like we had on Halloween a couple years before." It said, "This is the real thing." The ship was ordered back to San Francisco. He eventually does get his wish, to go to the Philippines. Come with Ezra as he becomes the wanderer, the man with Government Issue Gypsy blood. With more than

*Automotive User Interfaces* - Gerrit Meixner 2017-02-27  
This book focuses on automotive user interfaces for in-vehicle usage, looking at car electronics, its software of hidden technologies (e.g., ASP, ESP), comfort functions (e.g., navigation, communication, entertainment) and driver assistance (e.g., distance checking). The increased complexity of

automotive user interfaces, driven by the need for using consumer electronic devices in cars as well as autonomous driving, has sparked a plethora of new research within this field of study. Covering a broad spectrum of detailed topics, the authors of this edited volume offer an outstanding overview of the current state of the art; providing deep insights into usability and user experience, interaction techniques and technologies as well as methods, tools and its applications, exploring the increasing importance of Human-Computer-Interaction (HCI) within the automotive industry

2010-09-23

A vivid forecast of our planet in the year 2050 by a rising star in geoscience, distilling cutting-edge research into four global forces: demographic trends, natural resource demand, climate change, and globalization. The world's population is exploding, wild species are vanishing, our environment is degrading, and the costs of resources from oil to water are going nowhere but up. So what kind of world are we leaving for our children and grandchildren? Geoscientist and Guggenheim fellow Laurence Smith draws on the latest global modeling research to construct a sweeping thought experiment on what our world will be like in 2050. The result is both good news and bad: Eight nations of the Arctic Rim

(including the United States) will become increasingly prosperous, powerful, and politically stable, while those closer to the equator will face water shortages, aging populations, and crowded megacities sapped by the rising costs of energy and coastal flooding. The World in 2050 combines the lessons of geography and history with state-of-the-art model projections and analytical data- everything from climate dynamics and resource stocks to age distributions and economic growth projections. But Smith offers more than a compendium of statistics and studies- he spent fifteen months traveling the Arctic Rim, collecting stories and insights that resonate throughout the book. It is an approach much like Jared Diamond took in

*Chassis Symposium 2016 - Prof. Dr. Peter E. Pfeffer 2016-08-15*

In chassis development, the three aspects of safety, vehicle dynamics and ride comfort are at the top of the list of challenges to be faced. Addressing this triad of challenges becomes even more complex when the chassis is required to interact with assistance systems and other systems for fully automated driving. What is more, new demands are created by the introduction of modern electric and electronic architectures. All these requirements must be met by the chassis, together with its subsystems, the steering, brakes, tires and wheels. At the same time, all physical relationships and interactions have to be taken into account.

The locality was about fifty miles from Ninety-Six, in South Carolina, and Ninety-Six was so called because it was approximately that number of miles from Fort Price George. This was the nearest fort of any size. The three youths were no others than Dick and Tom Dare, and their comrade, Ben Foster, who had been members of the patriot army of America for a considerable period--for it was now May of the year 1781. These youths, who had done brave fighting, were also famous for having done much good work as scouts, messengers and spies, and they were now on a scouting and spying expedition, ordered by General Greene, their company having been sent down from Virginia into

And it seems that alien brains have some interesting side effects on the ravenous undead. Just ask zombie Li, who "wakes up" after a quick bite. The world is a wasteland, she's a walking corpse, and her "snack" has just melted into a noxious puddle of

goo. She's had better days. But she won't go through the rest of her undead life alone. As Li hits the road to figure out what happened, the end of the world brings her strange company, and even stranger enemies. The aliens are coming back, and it's going to take more than a handful of quirky zombies to stop them. She's going to need some serious fire power-like the remnants of the human race. If she can find them.
