Code - Lawrence Lessig 2016-09-19

There's a common belief that cyberspace cannot be regulated-that it is,
in its very essence, immune from the government's (or anyone else's)
control. Code, first published in 2000, argues that this belief is wrong. It
is not in the nature of cyberspace to be unregulable; cyberspace has no
"nature." It only has code-the software and hardware that make
cyberspace what it is. That code can create a place of freedom-as the
original architecture of the Net did-or a place of oppressive control.
Under the influence of commerce, cyberspace is becoming a highly
regulable space, where behavior is much more tightly controlled than in
real space. But that's not inevitable either. We can-we must-choose what
kind of cyberspace we want and what freedoms we will guarantee. These
choices are all about architecture: about what kind of code will govern
cyberspace, and who will control it. In this realm, code is the most
significant form of law, and it is up to lawyers, policymakers, and
especially citizens to decide what values that code embodies. Since its
original publication, this seminal book has earned the status of a minor
classic. This second edition, or Version 2.0, has been prepared through
the author's wiki, a web site that allows readers to edit the text, making
this the first reader-edited revision of a popular book.

How to Be a Muslim - Haroon Moghul 2017-06-06

A young Muslim leader's memoir of his struggles to forge an American
Muslim identity Haroon Moghul was thrust into the spotlight after 9/11,
becoming an undergraduate leader at New York University's Islamic
Center forced into appearances everywhere: on TV, before interfaith
audiences, in print. Moghul was becoming a prominent voice for
American Muslims even as he struggled with his relationship to Islam. In
high school he was barely a believer and entirely convinced he was going
to hell. He sometimes drank. He didn't pray regularly. All he wanted was
a girlfriend. But as he discovered, it wasn't so easy to leave religion
behind. To be true to himself, he needed to forge a unique American
Muslim identity that reflected his beliefs and personality. How to Be a
Muslim reveals a young man coping with the crushing pressure of a
world that fears Muslims, struggling with his faith and searching for
intellectual forebears, and suffering the onset of bipolar disorder. This is
the story of the second-generation immigrant, of what it's like to lose
yourself between cultures and how to pick up the pieces.

Special Relativity for Beginners - J[urgen Freund 2008

This book, first appearing in German in 2004 under the title *Spezielle
Relativit[ustheorie f[ur Studienanf[unger]*, offers access to the special
theory of relativity for readers with a background in mathematics and
physics comparable to a high school honors degree. All mathematical and
physical competence required beyond that level is gradually developed
through the book, as more advanced topics are introduced. The full
tensor formalism, however, is dispensed with as it would only be a
burden for the problems to be dealt with. Eventually, a substantial and
comprehensive treatise on special relativity emerges which, with its
gray-shaded formulary, is an invaluable reference manual for students
and scientists alike. Some crucial results are derived more than once with
different approaches: the Lorentz transformation in one spatial direction
three times, the Doppler formula four times, the Lorentz transformation
in two directions twice; also twice the unification of electric and
magnetic forces, the velocity addition formula, as well as the aberration
formula. Beginners will be grateful to find several routes to the goal;
moreover, for a theory like relativity, it is of fundamental importance to
demonstrate that it is self-contained and without contradictions. Author's

The Book of L - G. Rozenberg 2012-12-06

This book is dedicated to Aristid Lindenmayer on the occasion of his 60th birthday on November 17, 1985. Contributions range from mathematics and theoretical computer science to biology. Aristid Lindenmayer introduced language-theoretic models for developmental biology in 1968. Since then the models have been customarily referred to as L systems. Lindenmayer's invention turned out to be one of the most beautiful examples of interdisciplinary science: work in one area (developmental biology) induces most fruitful ideas in other areas (theory of formal languages and automata, and formal power series). As evident from the articles and references in this book, the interest in L systems is continuously growing. For newcomers the first contact with L systems usually happens via the most basic class of L systems, namely, DOL systems. Here "0" stands for zero context between developing cells. It has been a major typographical problem that printers are unable to distinguish between 0 (zero) and 0 (oh). Thus, DOL was almost always printed with "oh" rather than "zero", and also pronounced that way. However, this misunderstanding turned out to be very fortunate. The wrong spelling "DOL" of "DOL" could be read in the suggestive way: DO L Indeed, hundreds of researchers have followed this suggestion. Some of them appear as contributors to this book. Of the many who could not contribute, we in particular regret the absence of A. Ehrenfeucht, G. Herman and H.A. Maurer whose influence in the theory of L systems has been most significant.
