Contemporary Colleges and Universities - Joseph L. DeVitis 2013

Today's colleges and universities face countless uncharted challenges and possibilities. They are often prized as national treasures, yet, in tough economic times, they are becoming a major focus of contestation and controversy. This richly comprehensive survey takes a frank look at both polarities of the puzzles of academe. Presenting multiple perspectives on a wide array of crucial issues, the book features realistic representations of students, faculty, curriculum, administration, and the socio-cultural conditions that shape higher education. The incisive essays are written by practitioners on the front lines of the academy's battle to validate and sustain its core principles in a complex, rapidly evolving world. They afford valuable insights into the postsecondary scene for all who seek to nurture its development in these uncertain, troubled times. The text will appeal to students, faculty, administrators, student life professionals, and policymakers who shape human potential. In the end it will leave them with sobering thoughts about the present and future of higher education, an institution that still warrants their constant care and vigilance.

An Introduction to Statistical Learning - Gareth James 2013-06-24

An Introduction to Statistical Learning provides an accessible overview of the field of statistical learning, an essential toolset for making sense of the vast and complex data sets that have emerged in fields ranging from biology to finance to marketing to astrophysics in the past twenty years. This book presents some of the most important modeling and prediction techniques, along with relevant applications. Topics include linear regression, classification, resampling methods, shrinkage approaches, tree-based methods, support vector machines, clustering, and more. Color graphics and real-world examples are used to illustrate the methods presented. Since the goal of this textbook is to facilitate the use of these statistical learning techniques by practitioners in science, industry, and other fields, each chapter contains a tutorial on implementing the analyses and methods presented in R, an extremely popular open source statistical

software platform. Two of the authors co-wrote *The Elements of Statistical Learning* (Hastie, Tibshirani and Friedman, 2nd edition 2009), a popular reference book for statistics and machine learning researchers. An Introduction to Statistical Learning covers many of the same topics, but at a level accessible to a much broader audience. This book is targeted at statisticians and non-statisticians alike who wish to use cutting-edge statistical learning techniques to analyze their data. The text assumes only a previous course in linear regression and no knowledge of matrix algebra.

The Top American Research Universities - John V. Lombardi 2016-01-15

Why Civil Resistance Works - Erica Chenoweth 2011-08-09

For more than a century, from 1900 to 2006, campaigns of nonviolent resistance were more than twice as effective as their violent counterparts in achieving their stated goals. By attracting impressive support from citizens, whose activism takes the form of protests, boycotts, civil disobedience, and other forms of nonviolent noncooperation, these efforts help separate regimes from their main sources of power and produce remarkable results, even in Iran, Burma, the Philippines, and the Palestinian Territories.

Combining statistical analysis with case studies of specific countries and territories, Erica Chenoweth and Maria J. Stephan detail the factors enabling such campaigns to succeed and, sometimes, causing them to fail. They find that nonviolent resistance presents fewer obstacles to moral and physical involvement and commitment, and that higher levels of participation contribute to enhanced resilience, greater opportunities for tactical innovation and civic disruption (and therefore less incentive for a regime to maintain its status quo), and shifts in loyalty among opponents' erstwhile supporters, including members of the military establishment. Chenoweth and Stephan conclude that successful nonviolent resistance ushers in more durable and internally peaceful democracies, which are less likely to regress into civil war. Presenting a rich, evidentiary argument, they originally and systematically compare violent and nonviolent outcomes in different historical periods and geographical contexts, debunking the myth that violence occurs because of structural and environmental factors and that it is necessary to achieve certain political goals. Instead, the authors discover, violent insurgency is rarely justifiable on strategic grounds.

The Secrets of Picking a College (and Getting In!) - Lynn F. Jacobs 2015-10-23

Two award-winning professors, a former admissions officer at a major university (now a counselor at a prestigious high school), and a gifted high school senior (now in the throes of the college admissions process himself) team up to offer you over 600 tips, techniques, and strategies to help you get in to the college of your choice. Comprehensive, yet easy-to-read, this book will teach you: How to size up the colleges you're considering—and come up with a coherent list. What are college nights, college fairs, and college rep visits—and how you can use each to your advantage. What are "holistic", "contextualized", and "legacy" admissions—and how each can work for you. How some schools count "demonstrated interest"—and how you can take advantage of this little-known fact. What are Early Decision, Early Action, and Single-Choice Early Action—and whether any is right for you. How to figure out the true costs of college, and what is the difference between "need-" and "merit-based" aid. What it means when colleges say they meet "100% of demonstrated financial aid" and what "loan-free" means. When and how to make campus visits—and what to do on each. How to prepare for each section of the ACT or SAT—and how to increase your scores. What admissions officers are looking for in your application—and how to give it to

them. How to write the all-important Common App essay—and present your extra-curricular activities. How to prepare for an alumni interview—and present yourself in the best light. Whom to ask for letters-of-recommendation—and how to help them write the best possible letter. How to compare your final offers—and, in some cases, substantially improve them. When it's good to wait out the "wait list"—and when not. -and much, much more. When you understand the college admissions process, you can maximize your chance of success. Why not put yourself ahead of the pack?

Introductory Statistics - Barbara Illowsky 2017-12-19

Introductory Statistics is designed for the one-semester, introduction to statistics course and is geared toward students majoring in fields other than math or engineering. This text assumes students have been exposed to intermediate algebra, and it focuses on the applications of statistical knowledge rather than the theory behind it. The foundation of this textbook is Collaborative Statistics, by Barbara Illowsky and Susan Dean. Additional topics, examples, and ample opportunities for practice have been added to each chapter. The development choices for this textbook were made with the guidance of many faculty members who are deeply involved in teaching this course. These choices led to innovations in art, terminology, and practical applications, all with a goal of increasing relevance and accessibility for students. We strove to make the discipline meaningful, so that students can draw from it a working knowledge that will enrich their future studies and help them make sense of the world around them. The Coddling of the American Mind - Greg Lukianoff 2018-09-04

Something is going wrong on many college campuses in the last few years. Rates of anxiety, depression, and suicide are rising. Speakers are shouted down. Students and professors say they are walking on eggshells and afraid to speak honestly. How did this happen? First Amendment expert Greg Lukianoff and social psychologist Jonathan Haidt show how the new problems on campus have their origins in three terrible ideas that have become increasingly woven into American childhood and education: what doesn't kill you makes you weaker; always trust your feelings; and life is a battle between good people and evil people. These three Great Untruths are incompatible with basic psychological principles, as well as ancient wisdom from many cultures. They interfere with healthy development. Anyone who embraces these untruths—and the resulting culture of safetyism—is less likely to become an autonomous adult able to navigate the bumpy road of life. Lukianoff and Haidt investigate the many social trends that have intersected to produce these untruths. They situate the conflicts on campus in the context of America's

rapidly rising political polarization, including a rise in hate crimes and off-campus provocation. They explore changes in childhood including the rise of fearful parenting, the decline of unsupervised play, and the new world of social media that has engulfed teenagers in the last decade. This is a book for anyone who is confused by what is happening on college campuses today, or has children, or is concerned about the growing inability of Americans to live, work, and cooperate across party lines.

Desiring the Good - Katja Maria Vogt 2017-08-01

Desiring the Good defends a novel and distinctive approach in ethics that is inspired by ancient philosophy. Ethics, according to this approach, starts from one question and its most immediate answer: "what is the good for human beings?"--"a well-going human life." Ethics thus conceived is broader than moral philosophy. It includes a range of topics in psychology and metaphysics. Plato's *Philebus* is the ancestor of this approach. Its first premise, defended in Book I of Aristotle's *Nicomachean Ethics*, is that the final agential good is the good human life. Though Aristotle introduces this premise while analyzing human activities, it is absent from approaches in the theory of action that self-identify as Aristotelian. This absence, Vogt argues, is a deep and far-reaching mistake, one that can be traced back to Elizabeth Anscombe's influential proposals. And yet, the book is Anscombian in spirit. It engages with ancient texts in order to contribute to philosophy today, and it takes questions about the human mind to be prior to, and relevant to, substantive normative matters. In this spirit, *Desiring the Good* puts forward a new version of the *Guise of the Good*, namely that desire to have one's life go well shapes and sustains mid- and small-scale motivations. A theory of good human lives, it is argued, must make room for a plurality of good lives. Along these lines, the book lays out a non-relativist version of Protagoras's Measure Doctrine and defends a new kind of realism about good human lives.

Military Recruiting in the United States - Pat Elder 2016-12-08

Military Recruiting in the United States provides a fearless and penetrating description of the deceptive practices of the U.S. military as it recruits American youth into the armed forces. Long-time antiwar activist Pat Elder exposes the underworld of American military recruiting in this explosive and consequential book. The book describes how recruiters manage to convince youth to enlist. It details a sophisticated psy-ops campaign directed at children. Elder describes how the military encourages first-person shooter games and places firearms into the hands of thousands using the schools, its JROTC programs, and the Civilian Marksmanship Program to inculcate youth with a reverence for guns. Previously unpublished investigative work reveals how indoor shooting ranges in schools are threatening the health of children and school staff through exposure to lead particulate matter. The book provides a kind of "what's coming next manual" for European peacemakers as they also confront a rising tide of militarism. The book examines the disturbing,

nurturing role of the Catholic Church in recruiting youth. It surveys the wholesale military censorship of Hollywood films, pervasive military testing in the high schools, and an explosion of military programs directed toward youth. For more information, visit: www.counter-recruit.org

Creating Significant Learning Experiences - L. Dee Fink 2003-06-17

Dee Fink poses a fundamental question for all teachers: "How can I create courses that will provide significant learning experiences for my students?" In the process of addressing this question, he urges teachers to shift from a content-centered approach to a learning-centered approach that asks "What kinds of learning will be significant for students, and how can I create a course that will result in that kind of learning?" Fink provides several conceptual and procedural tools that will be invaluable for all teachers when designing instruction. He takes important existing ideas in the literature on college teaching (active learning, educative assessment), adds some new ideas (a taxonomy of significant learning, the concept of a teaching strategy), and shows how to systematically combine these in a way that results in powerful learning experiences for students. Acquiring a deeper understanding of the design process will empower teachers to creatively design courses for significant learning in a variety of situations.
