[A Historical Review and Analysis of Army Physical Readiness Training and Assessment](#) - Whitfield East 2013-12

"The Drillmaster of Valley Forge-Baron Von Steuben-correctly noted in his "Blue Book" how physical conditioning and health (which he found woefully missing when he joined Washington's camp) would always be directly linked to individual and unit discipline, courage in the fight, and victory on the battlefield. That remains true today. Even an amateur historian, choosing any study on the performance of units in combat, quickly discovers how the levels of conditioning and physical performance of Soldiers is directly proportional to success or failure in the field. In this monograph, Dr. Whitfield "Chip" East provides a pragmatic history of physical readiness training in our Army. He tells us we initially mirrored the professional Armies of Europe as they prepared their forces for war on

the continent. Then he introduces us to some master trainers, and shows us how they initiated an American brand of physical conditioning when our forces were found lacking in the early wars of the last century. Finally, he shows us how we have and must incorporate science (even when there exists considerable debate!) to contribute to what we do-and how we do it-in shaping today's Army. Dr. East provides the history, the analysis, and the pragmatism, and all of it is geared to understanding how our Army has and must train Soldiers for the physical demands of combat. Our culture is becoming increasingly "unfit," due to poor nutrition, a lack of adequate and formal exercise, and too much technology. Still, the Soldiers who come to our Army from our society will be asked to fight in increasingly complex and demanding conflicts, and they must be prepared through new, unique, and scientifically based techniques. So while Dr. East's monograph is a fascinating history, it is also a required call for all leaders to better understand the science and the art of physical preparation for the battlefield. It was and is important for us to get this area of training right, because getting it right means a better chance for success in combat.

Differential Equations - James R. Brannan 2014-12-03

The modern landscape of technology and industry demands an equally modern approach to differential equations in the classroom. Designed for a first course in differential equations, the third edition of Brannan/Boyce's *Differential Equations: An Introduction to Modern Methods and Applications* is consistent with the way engineers and scientists use mathematics in their daily work. The text emphasizes a systems approach to the subject and integrates the use of modern computing technology in the context of contemporary applications from engineering and science. The focus on fundamental skills, careful application of technology, and practice in modeling complex systems prepares students for the realities of the new millennium, providing the building blocks to be successful problem-solvers in today's workplace. Section exercises throughout the text provide hands-on experience in modeling, analysis, and computer experimentation. Projects at the end of each chapter provide additional opportunities for students to explore the role played by differential equations in the sciences and engineering.

Designed for Joy - Owen Strachan 2015-07-15

"Male and female he created them." —Genesis 1:27 It's one of the most important—and controversial—topics of our time. God created men and women in his image—equal in value and complementary in roles. These distinctive roles are not the vestiges of a bygone era, but integral to God's timeless good design for humanity. *Designed for Joy* includes fresh contributions from fourteen young leaders, casting a unified vision for Christian manhood and womanhood. Whether discussing the significance of gender, the truth about masculinity and femininity, the blessing of purity, or the challenge of raising children in a confusing world, this practical resource challenges us to embrace God's good design—for his glory and our joy.

The Nativist Prophets of Early Islamic Iran - Patricia Crone 2012-06-28

Patricia Crone's book is about the Iranian response to the Muslim penetration of the Iranian countryside, the revolts subsequently triggered there and the religious communities that these revolts revealed. The book also describes a complex of religious ideas that, however varied in space and unstable over time, has demonstrated a remarkable persistence in

Iran across a period of two millennia. The central thesis is that this complex of ideas has been endemic to the mountain population of Iran and occasionally become epidemic with major consequences for the country, most strikingly in the revolts examined here and in the rise of the Safavids who imposed Shi'ism on Iran. This learned and engaging book by one of the most influential scholars of early Islamic history casts entirely new light on the nature of religion in pre-Islamic Iran and on the persistence of Iranian religious beliefs both outside and inside Islam after the Arab conquest.

Air Warfare and Air Base Air Defense - John F. Kreis 2015-09-18

While the projection of air power in contemporary warfare is among the most complex endeavors facing a military commander, few of the activities required to support and sustain air forces in battle have been explored in depth in historical literature. Even less studied has been the defense of air bases. Since the introduction of airplanes to warfare, it was obvious that bases must be kept functioning at peak efficiency to seize and maintain air superiority over an enemy as well as to carry out close air support and interdiction operations. A number of factors have been critical in actions involving air bases: advancing technology in aircraft and in defensive weapons, command and control systems, detection capabilities, evolving air power doctrine that predisposes air forces to specific courses of action, human endurance and morale, camouflage or concealment, dispersion, the ability to foresee and counter the strategy of a potential enemy, and in many cases pure chance that favors one side over the other. In response to a request by the Air Force Director of Plans, the Office of Air Force History undertook to condense into one volume the experiences of various nations' air forces in defending air bases against attacks from the air. Maj. John Kreis, an experienced air security officer who spent much of his career providing protection for U. S. Air Force bases, accomplished this task by adopting a case study approach that highlights the interplay of the factors affecting air base defense over half a century. In these pages he has presented examples of the earliest attempts to defend airfields and troops in World War I from aerial assault. He chronicles the development of radar and command organizations that

influenced so heavily the Royal Air Force's performance in the Battle of Britain, the ability to marshal defenses and repair crews on the island of Malta, and evolving command arrangements in North Africa that made for success against a capable enemy whose own command arrangements were deficient. Cases were also chosen to investigate failures from which sound lessons could be drawn. Limited conflict in the cold war world has imposed its own logic on base defense and attacks on installations, and the examples of base destruction in the Middle East wars between 1948 and 1973 are also instructive. This volume has wide application in staff planning for developing base defensive emplacements, providing repair and support services, and training base personnel to react in a host of contingencies. For the Air Force generally, it offers new insights into matters not usually treated in doctrinal literature. The cases elaborated upon here will also have an appeal to a wider public audience interested in military aviation in all of its aspects.

Counter-Unmanned Aircraft System (CUAS) Capability for Battalion-and-Below Operations - National Academies of Sciences, Engineering, and Medicine 2018-03-29

The development of inexpensive small unmanned aircraft system (sUAS) technologies and the growing desire of hobbyists to have more and more capability have created a sustained sUAS industry, however these capabilities are directly enabling the ability of adversaries to threaten U.S. interests. In response to these threats, the U.S. Army and other Department of Defense (DoD) organizations have invested significantly in counter-sUAS technologies, often focusing on detecting radio frequency transmissions by sUASs and/or their operators, and jamming the radio frequency command and control links and Global Positioning System signals of individual sUASs. However, today's consumer and customized sUASs can increasingly operate without radio frequency command and

control links by using automated target recognition and tracking, obstacle avoidance, and other software-enabled capabilities. The U.S. Army tasked the National Academies of Sciences, Engineering, and Medicine to conduct a study to address the above concerns. In particular, the committee was asked to assess the sUAS threat, particularly when massed and collaborating; assess current capabilities of battalion-and- below infantry units to counter sUASs; identify counter-sUAS technologies appropriate for near- term, mid-term, and far-term science and technology investment; consider human factors and logistics; and determine if the Department of Homeland Security could benefit from DoD efforts. This abbreviated report provides background information on the full report and the committee that prepared it.

Jolly Fellows - Richard Stott 2009-08-24

"Stott finds that male behavior could be strikingly similar in diverse locales, from taverns and boardinghouses to college campuses and sporting events. He explores the permissive attitudes that thrived in such male domains as the streets of New York City, California during the gold rush, and the Pennsylvania oil fields, arguing that such places had an important influence on American society and culture. Stott recounts how the cattle and mining towns of the American West emerged as centers of resistance to Victorian propriety. It was here that unrestrained male behavior lasted the longest, before being replaced with a new convention that equated manliness with sobriety and self-control."

Kurdish Armour Against ISIS - Ed Nash 2021-09-16

One of the most remarkable mechanized campaigns of recent years pitted the brutal and heavily armed jihadis of Islamic State against an improvised force belonging to the Kurdish YPG (later the SDF). While some Kurdish vehicles were originally from Syrian Army stocks or captured from ISIS, many others were extraordinary homemade AFVs based on truck or digger mechanicals, or duskas, the Kurds' version of the technical. Before US air power was sent to Syria, these were the Kurds' most powerful and mobile weapons. Co-written by a British volunteer who fought with the Kurds and an academic expert on armoured warfare, this study explains how the Kurds built and used their AFVs in the war against 'Daesh', and identifies as far as possible which vehicles took part in major battles, such as Kobane, Manbij and Raqqa. With detailed new artwork depicting the Kurds' range of armour and many previously unpublished photos, this is an original and fascinating look at modern improvised mechanized warfare.

The Political Unconscious - Fredric Jameson 2015-03-03

Fredric Jameson, in *The Political Unconscious*, opposes the view that literary creation can take place in isolation from its political context. He asserts the priority of the political interpretation of literary texts, claiming it to be at the center of all reading and understanding, not just a supplement or auxiliary to other methods current today. Jameson supports his thesis by looking closely at the nature of interpretation. Our understanding, he says, is colored by the concepts and categories that we inherit from our culture's interpretive tradition and that we use to comprehend what we read. How then can the literature of other ages be understood by readers from a present that is culturally so different from the past? Marxism lies at the foundation of Jameson's answer, because it conceives of history as a single collective narrative that links past and present; Marxist literary criticism reveals the unity of that uninterrupted narrative. Jameson applies his interpretive theory to nineteenth- and twentieth-century texts, including the works of Balzac, Gissing, and Conrad. Throughout, he considers other interpretive approaches to the works he discusses, assessing the importance and limitations of methods as different as Lacanian psychoanalysis, semiotics, dialectical analysis, and allegorical readings. The book as a whole raises directly issues that have been only implicit in Jameson's earlier work, namely the relationship between dialectics and structuralism, and the tension between the German and the French aesthetic traditions.
