Transitions to Alternative Vehicles and Fuels - National Research Council 2013-04-14

For a century, almost all light-duty vehicles (LDVs) have been powered by internal combustion engines operating on petroleum fuels. Energy security concerns about petroleum imports and the effect of greenhouse gas (GHG) emissions on global climate are driving interest in alternatives. Transitions to Alternative Vehicles and Fuels assesses the potential for reducing petroleum consumption and GHG emissions by 80 percent across the U.S. LDV fleet by 2050, relative to 2005. This report examines the current capability and estimated future performance and costs for each vehicle type and non-petroleum-based fuel technology as options that could significantly contribute to these goals. By analyzing scenarios that combine various fuel and vehicle pathways, the report also identifies barriers to implementation of these technologies and suggests policies to achieve the desired reductions. Several scenarios are promising, but strong, and effective policies such as research and development, subsidies, energy taxes, or regulations will be necessary to overcome barriers, such as cost and consumer choice.

A Beginner's Guide to Mold Avoidance - Erik Johnson 2015-05-29

Disgracefully, many of the sickest people on the planet have been almost wholly ignored by the medical community. The mold avoidance approach described in this book was developed with the goal of helping these extremely ill and stubbornly treatment-resistant individuals (often described as having myalgic encephalomyelitis, chronic fatigue syndrome, chronic Lyme, fibromyalgia, multiple chemical sensitivity, Gulf War illness, POTS or toxic mold illness). The underlying premise of the approach presented here is that many or all of these individuals suffer from a severe hyperreactivity to certain kinds of mold toxins. This approach suggests that insofar as individuals are reacting to very low levels of these mold toxins, decreasing exposures to a level that does not prompt a reaction will allow movement toward wellness to be achieved. Both of the authors of this book were very sick with this kind of illness for many years and have become mostly recovered as a result of this approach. During recent years, many other individuals who were very ill with this sort of disease also have experienced major improvements as a result of following this approach. This book is designed to share the basics of the approach with a broader audience, so that more sufferers can learn about it and decide if it might be worth pursuing.

General Motors: Life Inside the Factory - Richard Thomas Gall 2011-01-04

This book portrays life inside a General Motors factory in the 1970s. Have you ever wondered why or how the lazy hourly workers came to be that way? This myth is debunked throughout the book. Anyone who has ever worked hourly for General Motors, the big three, or any large manufacturing company will enjoy the experiences provided in this book. They will find themselves reminiscing in the past about their own work experiences. Anyone who has had a close relative that worked in a factory will want to read this book to get a feel of what their loved ones went through while earning a living. The book comes to the stunning conclusion that General Motors top executives wasted a tremendous amount of human resources over the years. They looked down upon the factory workers and treated them as if they were disposable employees. They never attempted to tap into the vast and almost incalculable amount of brainpower available because they simply dismissed their classification hourly worker as useless. They treated them as if they were the source of all of their problems. They never even considered that with four hundred thousand hourly employees they might have had the resources right in front of them to help in solving the vast and complex problems that exist in the every day world of work. In today's competitive manufacturing environment Lean Manufacturing has stepped into the forefront for improvement. One of the two pillars of Lean manufacturing is respect for the worker. If you're an executive leader, manager or a student of lean you'll want to read this book to see how not to do it. One theory of management says that if you don't like what you see around you go look in a mirror first because your workforce is a reflection of your thinking and actions.

The Doper Next Door - Andrew Tilin 2011-05-25

What happens to a regular guy who dopes? Surprised to learn that pro athletes aren't the only ones taking performance-enhancing substances, journalist Andrew Tilin goes in search of the average juicing Joe, hoping to find a few things out: Why would normal people take these substances? Where do folks get them? Does the stuff really work? But these controversial drugs often silence their users, and so his queries might have gone unanswered had Tilin not looked in the mirror and succumbed to curiosity. Soon wielding syringes, this forty-something husband and father of two children becomes the doper next door. During his yearlong odyssey, Tilin is transformed. He becomes stronger, hornier, and aggressive. He wades into a subculture of doping physicians, real estate agents, and aging women who believe that Tilin's type of legal "hormone replacement therapy" is the key to staying young—and he often agrees. He also lives with the price paid for renewed vitality, worrying about his health, marriage, and cheating ways as an amateur bike racer. And all along the way, he tells us what doping is really like—empowering and scary.

Mustang by Design - James Dinsmore 2018-09-14

p.p1 {margin: 0.0px 0.0px 0.0px 0.0px; font: 12.0px Arial} Without question, the 1964-1/2 Mustang is one of the most important and influential cars in automotive history. When Ford launched the Mustang, it created an automotive revolution. Award-winning designer and stylist Gale Halderman was at the epicenter of the action at Ford, and, in fact, his initial design sketch formed the basis of the new Mustang. He reveals his involvement in the project as well as telling the entire story of the design and development of the Mustang. Authors and Mustang enthusiasts James Dinsmore and James Halderman go beyond the front doors at Ford into the design center, testing grounds, and Ford facilities to get the real, unvarnished story. Gale Halderman offers a unique behind-the-scenes perspective and firsthand account of the inception, design, development, and production of the original Mustang. With stinging losses from the Edsel fresh in minds at Ford, the Mustang project was an uphill battle from day one. Lee Iacocca and his assembled team had a herculean task to convince Henry Ford II to take a risk on a new concept of automobile, but with the help of Hal Sperlich's detailed market research, the project received the green light. Henry Ford II made it clear that jobs were on the line, including Iacocca's, if it failed. The process of taking a car from sketch to clay model to prototype to preproduction and finally finished model is retraced in insightful detail. During the process, many fascinating experimental cars, such as the Mustang I two-seater, Mustang II prototype, Mustang Allegro, and Shorty, were built. But eventually the Mustang, based on the existing Ford Falcon, received the nod for final production. In a gala event, it was unveiled at the 1964 World's Fair in New York. The Mustang received public accolades and critical acclaim, and soon it became a runaway hit. After the initial success, Ford designers and Gale Halderman designed and developed the first fastback Mustangs to compliment the coupes. The classic Mustang muscle cars to follow, including the GT, Mach 1, and others, are profiled as well. The Mustang changed automotive history and ushered in the pony car era as a nimble, powerful, and elegantly styled sports coupe. But it could so easily have stumbled and wound up on the scrap pile of failed new projects. This is the remarkable and dramatic story of how the Mustang came to life, the demanding design and development process, and, ultimately, the triumph of the iconic American car.
