Science Fiction by Scientists - Michael Brotherton
2016-11-15

This anthology contains fourteen intriguing stories by active research scientists and other writers trained in science. Science is at the heart of real science fiction, which is more than just westerns with ray guns or fantasy with spaceships. The people who do science and love science best are scientists. Scientists like Isaac Asimov, Arthur C. Clarke, and Fred Hoyle wrote some of the legendary tales of golden age science fiction. Today there is a new generation of scientists writing science fiction informed with the expertise of their fields, from astrophysics to computer science, biochemistry to rocket science, quantum physics to genetics, speculating about what is possible in our universe. Here lies the sense of wonder only science can deliver. All the stories in this volume are supplemented by afterwords commenting on the science underlying each story.

"A thrilling story of seduction, betrayal, and loss, Freud's Mistress will titillate fans of *Memoirs of a Geisha* and *The Other Boleyn Girl*."—Booklist In fin-de-siècle Vienna, it was not easy for a woman to find fulfillment both intellectually and sexually. But many believe that Minna Bernays was able to find both with one man—her brother-in-law, Sigmund Freud. At once a portrait of two sisters—the rebellious, independent Minna and her inhibited sister, Martha—and of the compelling and controversial doctor who would be revered as one of the twentieth century's greatest thinkers, *Freud's Mistress* is a novel rich with passion and historical detail and "a portrait of forbidden desire [with] a thought-provoking central question: How far are you willing to go to be happy?" * Publishers Weekly

The Book of L - G. Rozenberg 2012-12-06

This book is dedicated to Aristid Lindenmayer on the occasion of his 60th birthday on November 17, 1985. Contributions range from mathematics and theoretical computer science to biology. Aristid Lindenmayer introduced language-theoretic models for developmental biology in 1968. Since then the models have been customarily referred to as L systems. Lindenmayer's invention turned out to be one of the most beautiful examples of interdisciplinary science: work in one area (developmental biology) induces most fruitful ideas in other areas (theory of formal languages and automata, and formal power series). As evident from the articles and references in this book, the interest in L systems is continuously growing. For newcomers the first contact with L systems usually happens via the most basic class of L systems, namely, DOL systems. Here "0" stands for zero context between developing cells. It has been a major typographical problem that printers are unable to distinguish between 0 (zero) and 0 (oh). Thus, DOL was almost always printed with "oh" rather than "zero", and also pronounced that way. However, this misunderstanding turned out to be very fortunate. The wrong spelling "DOL" of "DOL" could be read in the suggestive way: DO L. Indeed, hundreds of researchers have followed this suggestion. Some of them appear as contributors to this book. Of the many who could not contribute, we in particular regret the absence of A. Ehrenfeucht, G. Herman and H.A. Maurer whose influence in the theory of L systems has been most significant.

Killer Verse: Poems of Murder and Mayhem is a spine-tingling collection of terrifically creepy poems about the deadly art of murder. The literary forms they inhabit are just as varied, from the colorful melodramas of old Scottish ballads to the hard-boiled poetry of twentieth-century noir, from lighthearted comic riffs to profound poetic musings on murder. Robert Browning, Thomas Hardy, W. H. Auden, Stevie Smith, Mark Doty, Frank Bidart, Toi Derricotte, Lynn Emanuel, and Cornelius Eady are only a few of the many poets, old and new, whose work is captured in this heart-stopping-and-criminally-entertaining-collection.

Urban Biodiversity - Alessandro Ossola 2017-11-28

Urban biodiversity is an increasingly popular topic among researchers. Worldwide, thousands of research projects are unravelling how urbanisation impacts the biodiversity of cities and towns, as well as its benefits for people and the environment through ecosystem services. Exciting scientific discoveries are made on a daily basis. However, researchers often lack time and opportunity to communicate these findings to the community and those in charge of managing, planning and designing for urban biodiversity. On the other hand, urban practitioners frequently ask researchers for more comprehensible information and actionable tools to guide their actions. This book is designed to fill this cultural and communicative gap by discussing a selection of topics related to urban biodiversity, as well as its benefits for people and the urban environment. It provides an interdisciplinary overview of scientifically grounded knowledge vital for current and future practitioners in charge of urban biodiversity management, its conservation and integration into urban planning. Topics covered include pests and invasive species, rewilding habitats, the contribution of a diverse urban agriculture to food production, implications for human well-being, and how to engage the public with urban conservation strategies. For the first time, world-leading researchers from five continents convene to offer a global interdisciplinary perspective on urban biodiversity narrated with a simple but rigorous language. This book synthesizes research at a level suitable for both students and professionals working in nature conservation and urban planning and management.

Structuring the Thesis - David Kember 2018-07-23

The book is a collective investigation of the structuring of theses in education, the social sciences and other disciplines that commonly do not follow the standard procedures of the scientific method. To help research students design a structure for their own thesis and liberate their investigations from the constraints associated with the use of the conventional structure, it explains how the structures adopted were designed to suit the topic, methodology and paradigm. It also provides a wide range of examples to draw upon, which suit a broad spectrum of theory, methodological approaches, research methods and paradigms. Additionally, by analyzing the methodologies and paradigms, and reviewing the methodological and paradigmatic spectrum, it offers a significant contribution to the way research is conceptualized. The

book addresses a number of key questions faced by students, supervisors and examiners: •Why do examiners often find it difficult to read work in non-scientific disciplines when these are structured in accordance with the conventional scientific method? •Why do students in non-scientific disciplines struggle to write up the outcomes of their research in the conventional structure? •What alternative thesis structures can be devised to better suit the wide range of methods? •Which theories and paradigms are commonly followed in education and the social sciences and how do these perspectives influence the research process? •What methods, theories and paradigms are commonly adopted by education and social science students and what problems do these pose when students write their theses?
